

This Project and its partners have been very industrious since our last Newsletter after our Study Visit to Lanciano. We met monthly online and worked collaboratively to produce our second set of Micro credential Units on Video Conferencing and Video/Photos for E-Marketing. These consist of 12 Units of Learning followed by assessment and award of Digital Badges. In addition we created interactive videos in support of the learning plus an Operations Manual offering guidance on how to access the Moodle platform and the Micro credential Units on offer. In addition all materials are available in three languages : English, Italian and Spanish .

Study Visit 2

The Spanish partner hosted the second study visit of the project. During the visit, project partners, together with testers from a local company in Huelva, tested the project materials and provided valuable feedback. This input was then integrated to further develop the Platform and training materials, ensuring they are more relevant, user-friendly, and responsive to the real needs of craftspeople and SMEs.

What We Achieved

Through the AVED project, we developed one interactive and easy-to-use digital Platform designed to strengthen the digital skills of professionals working in craftsmanship and SMEs. The Platform and training materials were tested with real-life users, allowing partners to refine the content and improve its practical relevance and effectiveness. In addition, project partners successfully exchanged good practices, strengthened their capacity to manage EU initiatives, and enhanced their ability to deliver practical training to VET organisations and professionals in everyday working contexts.
